Graham Ellinson

DATA SCIENTIST · TRADING · AI · DEFI

Data Scientist on **eToro's trading desk** working across three domains few people combine: **advanced machine learning** (deep reinforcement learning, neural networks, LSTM), real **trading, hedging & execution**, and **on-chain DeFi**. I ship production AI agents and quant models that move real money — then I **embed with non-technical teams and drive adoption** so the work multiplies across the desk instead of depending on me. **MSc Artificial Intelligence (Distinction); BSc Mathematics (First Class Honours)**.

Advanced ML · deep RL · ANN/CNN · LSTM

Trading · hedging · execution

DeFi · smart contracts · tokenization

Production AI agents

AI adoption & enablement

— EXPERIENCE

Data Scientist — eToro

2020 - Present

Trading Department · Tel Aviv, Israel

- ▶ **Built and shipped an AI reconciliation platform** that explains multi-billion-dollar daily position breaks across multiple liquidity providers in seconds — embedded with the operations team, automated their manual investigation, then taught them to run and extend the agent themselves.
- ▶ **Shipped a daily hedge-cost reporting agent** covering every asset-class book, with rule-based anomaly detection and failsafe auto-rollback safeguards; handed it over so the desk now owns and updates it.
- ▶ **Built advanced ML for the desk:** deep-RL portfolio construction (higher revenue, lower latency), Random Forest & LSTM hedging models that cut trading cost, an A/B-tested neural-net churn model, and GARCH volatility/regime models on full L2 order-book data.
- ▶ **Engineered on-chain DeFi systems** — tokenizing assets via mint & burn and writing Solidity smart contracts, including liquidation bots designed to resist MEV and sandwich attacks across EVM and Solana.
- ▶ **Created the eToro Trading Academy** — a live 21-course full-stack platform (FastAPI + React on Databricks Apps) with an embedded Execution Lab and AI tutor; **led a team of five analysts** during a maternity-leave cover and migrated processes to Azure Databricks.

Data Analyst — Explorium

Apr 2019 - Aug 2019

Data enrichment & ML feature engineering on AWS — building and validating the features that fed the company's machine-learning models. Tel Aviv, Israel.

Data Analyst — I Know First

Oct 2018 - Apr 2019

ML back-testing for algorithmic portfolio management — evaluating predictive trading signals and quantifying strategy performance. Tel Aviv, Israel.

EDUCATION

MSc Artificial Intelligence — Distinction

University of Bath · 2021 - 2023

BSc Mathematics — First Class Honours

Northumbria University · 2016 - 2020

TECHNICAL SKILLS

ML & AI

Deep RL · Neural nets (ANN/CNN) · LSTM/RNN · Random Forest · GARCH · LLM agents · RAG

QUANT & TRADING

Hedging · Execution algos · Derivatives pricing · Microstructure · L2 order book · Reconciliation

DEFI & DATA/CLOUD

Solidity · Smart contracts · Mint/Burn · Liquidation bots · Databricks · Azure · PySpark · Delta · Lakebase

LANGUAGES & WEB

Python · R · SQL · Solidity · TypeScript · FastAPI · React

LANGUAGES

English — Native

Hebrew — Working proficiency

French — Conversational

VOLUNTEERING

Mathematics Tutor — Action Tutoring, 2018-2020

Mentor — African Refugee Development Centre, 2018-2019
